Tweet: New official Chinese numbers show over 40% of 31 provincial-level jurisdictions reported more deaths than births last year. Total population grew by 480,000 to 1.4B in 2021, the smallest increase since 1962, with births down 11.5% from 2021. @SCMPNews

Summary: Among China's 31 provincial-level jurisdictions, 13 reported more deaths than births last year. Those 13 comprised the wealthy regions of Shanghai, Jiangsu, and Tianjin; the central provinces of Sichuan, Chongqing, Hunan, and Hubei; Hebei, Shanxi, and the Inner Mongolia autonomous region in the north and northwest; and the northeastern rust-belt provinces of Liaoning, Jilin, and Heilongjiang. China has shined a bit more light on its demographic crisis, with newly released figures showing that more than a third of its provinces saw their populations shrink last year. Chinese mothers gave birth to just 10.62 million babies in 2021 – an 11.5% decline from 2020.
