Tweet: The Chinese are seeking to deploy 1,500 nuclear weapons by 2035 and have doubled their intelligence, surveillance, and reconnaissance (ISR) satellite systems since 2018 to 260 satellites, according to a new Pentagon report. @ft

Summary: The Pentagon said Beijing “probably accelerated” its nuclear expansion last year and was on track to have a stockpile of 1,500 nuclear weapons by 2035. The Pentagon said China was also investing heavily in space, including everything from intelligence assets to weapons to counter an adversary, such as kinetic-kill missiles and ground-based lasers. It said China had more than 260 intelligence, surveillance, and reconnaissance (ISR) satellite systems, which marked an almost doubling since 2018. US officials say China has shown no willingness to engage in any talks about nuclear weapons.
