Tweet: Japan's native population fell by 837,000 in 2023, almost 100 people an hour. Some of the decline was offset by immigration for a net change of 595,000. Japan's foreign population reached a record high of 3.2mm in June 2023.

Summary: The number of Japanese nationals dropped by the biggest amount in a year since comparable records began in 1950 — a fall of 837,000 in the 12 months to October 1, 2023. That decline represents a daily drop of 2,293 people or just under 96 per hour. Japan's overall population was 124.3mn in October — down 595,000 from the previous year when adjusted for steadily rising levels of migrant workers, overseas students, and foreign permanent residents. In a report released last year, the country's Immigration Services Agency said the number of foreign nationals living in Japan had reached a record high of 3.2mn at the end of June 2023. The increase was driven by expansion in a visa programme for skilled workers in specified sectors and in technical internships.
