Tweet: [The suicide rate for 5-14-year-old Chinese quadrupled between 2010-2021 @NikkeiAsia](#)

Summary: During the 11-year period, the suicide rate among children aged 5 to 14 increased from about 0.2 to about 0.8 per 100,000 people, according to the study published June 23 in China CDC Weekly, the official journal of the Chinese Center for Disease Control and Prevention. The study also found that the suicide rate for 15- to 24-year-olds fell by 6.8% per year from 2010 to 2017, but then surged at an annual rate of 19.6% to 2021, the latest available data.
