**Tweet:** Canada's population growth of 3.2% in 2023 was among the world's highest, behind only a few high-fertility African countries. Over 97% of this growth was driven by immigration.

**Summary:** At a 3.2% annual rate, Canada has among the world's fastest population growth, only behind a few African countries with high fertility. The country added roughly the equivalent of Estonia's populace last year. Only 2.4% of the increase came from net births, and the rest was driven by international migration, primarily foreign workers and students. Without temporary immigration, Canada's population growth would have been 1.2%. But with plans to cut the numbers of temporary residents and international students already in place, 2023 will likely mark the peak of the immigration-driven population boom in Canada.
