Tweet: [According to new Financial Stability Report the private sector is deleveraging relative to GDP.](#)

Summary: At the end of Q4 2022 total outstanding private credit was split about evenly between businesses and households, with businesses owing \$19.9 trillion and households owing \$19.0 trillion. The combined total debt of nonfinancial businesses and households grew more slowly than nominal GDP since the November report, leading to a modest decline in the debt-to-GDP ratio, which moved back closer to the level that had prevailed for much of the decade before the pandemic. The decline in the overall ratio was driven by a larger decline in household debt-to-GDP ratio compared to the business debt-to- GDP ratio.
