Tweet: Breaking down the 2022 PISA math results by subpopulation, @cremieuxrecueil finds that US Asians and whites topped the charts, scoring on par with top international performers.

Summary: With the latest PISA results, America has proven once again that it has one of the smartest populations and, perhaps, the best education systems. American Asians and Whites topped the charts; American Hispanics beat all other Hispanics; American Blacks did well. Some people think the most important scale is mathematics, while others think it's reading, and a select few think it's science. They all indicate g, so there's no a priori rationale for favoring any particular scale. Regardless, look at how America did in mathematics! America's reading performance is perhaps its most laudable this year. American Asians came in first in this test, and American Whites came in third.
