Tweet: [. @WSJ reports that year-over-year wages for the bottom 10% of earners increased 9.8% relative to 7.4% for the median for all workers. Workers in the top 10% of earnings saw a 5.7% gain.](#)

Summary: Median weekly earnings for all workers were 7.4% higher, year-over-year, at the end of 2022, according to an analysis of newly released Labor Department data. The bottom 10th of wage earners—those that make about \$570 a week—saw their pay increase by nearly 10%. Better pay increases late last year went to workers who attended college, a reversal from earlier in the pandemic when those who hadn't completed high school saw outsized gains. The annual rate of wage growth for workers with less than a high school diploma touched a recent peak in the second quarter of 2022, when it was up 11.1% over the prior year, higher than the 7.6% wage growth during that period for workers with a bachelor's degree or higher. The median raise for Black Americans employed full-time was 11.3%, compared with the prior year.
