Tweet: According to the UN, India's population will overtake China's this year if it hasn't already. India's population isn't expected to peak until 2063.

Summary: The United Nations has said India's population is projected to surpass China's sometime this year. Many demographers estimate it could happen this month, if it hasn't already. India's population is expected to reach 1.429 billion by the end of the year, according to the U.N. China will fall to second place, with 1.426 billion people. Both dwarf the U.S. at a projected 340 million. India's population is expected to keep growing for the next four decades, peaking at nearly 1.7 billion in 2063.
