Tweet: [Almost 35% of Americans are engaged at work relative to just 5% of Japanese, 7% of French workers, 10% of Britons, and 17% of Germans.](#)

Summary: Gallup suggests that remarkably few people, just about anywhere, are happily engaged with their work. The average of the 73 countries in our filtered version showed that 20% were thriving and 15% were loud quitters. The remaining 65% were quietly dragging their feet. Among big economies, America and India had the highest share of thrivers, though that was only around one-third. In Italy and Japan just 5% were thriving, the lowest shares in the sample.
