Tweet: Japan and the Netherlands are finalizing plans to join American exports controls designed to limit Chinese semiconductor production. @Bloomberg

Summary: Japan and the Netherlands are poised to join the US in limiting China's access to advanced semiconductor machinery. The Netherlands will expand restrictions on ASML Holding NV, which will prevent it from selling at least some of its so-called deep ultraviolet lithography machines, crucial to making some types of advanced chips and without which attempts to set up production lines may be impossible. Japan will set similar limits on Nikon Corp.
