Tweet: Torsten Sløk notes “When the Fed raises interest rates, money market funds pay a higher dividend.” Current dividends are \$500B/year, the equivalent of 2.5% of consumer spending.

Summary: When the Fed raises interest rates, money market funds pay a higher dividend to households. This effect is very significant and currently running at \$500B, or around 2.5% of consumer spending. Put differently, Fed hikes are boosting consumer spending through higher money market fund dividends.
