Tweet: Banks unrealized losses increased in 2022 as the Fed continued its hiking cycle. @WSJecon

Summary: One way to understand what is happening in the financial sector is to look at banks' unrealized gains and losses, or how much their securities holdings have risen or fallen in value. In 2021, it was a mix of gains and losses, and interest rates were relatively low. Last year, as the Federal Reserve raised interest rates, the value of banks' bond portfolios declined. Unrealized losses are shown as a share of each bank's total assets.
