Tweet: After reporting record 21.3% youth unemployment in June, China did not report the July figure in a wider data release on Tuesday and will stop publishing data on youth unemployment.

Summary: China has said it will stop publishing data on youth unemployment, weeks after the gauge hit a record level, in a sign of mounting pressure on policymakers as new data pointed to weakness in the recovery of the world's second-largest economy. Youth unemployment, which China began reporting in 2018, hit 21.3% in June, but the figure was not included in a wider data release for July on Tuesday.
