Tweet: The US South (16 states plus DC) has 39% of the population and 1/3 of GDP. Growth in the region is uneven with seven states led by FL, TN, and TX outpacing US GDP growth between 2017-2022 while OK and LA shrank. @BankofAmerica

Summary: People have been moving to the South over a long period, with the pace accelerating during the pandemic. In recent internal data, covering 2023 Q3, we see a continued strong inflow into southern Metropolitan Statistical Areas (MSAs), such as Austin, San Antonio, Jacksonville, and Tampa. And, on top of the migration story the South has a higher birth rate than other census regions, too. But GDP growth across the South has not been even. Between 2017 and 2022, seven southern states had a larger increase than the average US rise of 11%. Of these, Florida showed the biggest jump in GDP, by 20%, followed by Texas and Tennessee, growing by 15%. However, over the same period, nine others and D.C. expanded more slowly, with Oklahoma and Louisiana showing negative growth.
