Tweet: Energy exports were \$420 billion in 2022 (13.5% of American exports). It is the fifth year in a row the US has been a net energy exporter. @GregorMacdonald

Summary: The value of US energy exports is now a significant component of total US exports. US exports last year hit \$3,108 billion, making energy's \$420 billion 13.5% of the total. The growth contribution from energy is even more impressive. US exports jumped \$541 billion last year from 2021's level of \$2,567 billion, which means the energy export advance of \$143 billion easily comprised more than 25% of total export growth.
