Tweet: [Real hourly compensation is above 2019 levels but below the 2015-19 trend line. @JosephPolitano](#)

Summary: Cumulative growth in hourly compensation has exceeded inflation since the end of 2019, though it remains slightly below the trend of strong growth seen in the latter half of the 2010s. The real wage distribution has compressed—that is, lower-wage workers have seen proportionally larger gains than higher-wage workers, although this effect is lessened by the fact that low-income households have faced greater inflation than high-income households.
