Tweet: US median household income fell in real terms by 2.1% in 2022 for the third straight year, as inflation outpaced wage gains. Since its pre-pandemic peak, real household income has fallen by almost 5%.

Summary: Americans' inflation-adjusted median household income fell to \$74,580 in 2022, declining 2.3% from the 2021 estimate of \$76,330, the Census Bureau said Tuesday. The amount has dropped 4.7% since its peak in 2019. Wage growth for the typical worker outstripped inflation starting in December 2022, with inflation-adjusted wages rising about 3% in July, according to data from the Atlanta Fed Wage Tracker and the Labor Department.
