Publication Date	January 19, 2024

Tweet: Douglas Elmendorf and Heidi Williams argue that expanding the number of employment-based green cards for applicants with graduate STEM degrees would reduce the deficit by \$129 billion between 2025 and 2034 relative to current accounting.

Summary: The Penn Wharton Budget Model (PWBM) forecasts that exempting employment-based green cards from statutory limits for applicants (and their families) who have earned a doctoral or master's degree in a STEM field---similar to Section 80303 in H.R. 4521---would reduce federal budget deficits by \$129 billion from 2025 to 2034. In contrast, a conventional budget estimate, which would include projected increases in federal spending but not the effect of a larger population on federal tax revenues, shows an increase in federal deficits of \$4 billion. Over the following decade, the difference between estimates under the conventional approach and the population-change approach is even larger, from a \$74 billion increase in the budget deficit under the conventional approach to a \$634 billion decrease under the population-change approach.
