Tweet: [.@Jasonfurman argues that while core CPI excluding housing and used cars has moderated it still isn't consistent with the Fed's target, "the job of getting inflation to 2% or even 3% is still not done."](#)

Summary: The broad story continues to be that goods prices have gone from unusually large increases to unusually large decreases. And services prices have slowed a little from their rapid summer pace but continue to grow very quickly. Excluding housing (which is ~40% of core) and used cars, super-core inflation was consistently modest for the last three months at a 1.8% annual rate over this period. That is the lowest since February 2021. Overall, 3 consecutive months of relatively moderate core inflation. And some positive developments yet to happen, like future shelter slowdown. But a bit less moderation than hoped & the job of getting inflation to 2% or even 3% is still not done.
