Tweet: [.@foxjust reports that young American men who play video games played for an average of almost four hours a day in 2022.](#)

Summary: Statistics released last month by the US Bureau of Labor Statistics from the annual American Time Use Survey show that the time young men spent “playing games” — the survey doesn’t differentiate between electronic and non-electronic games, but most researchers assume it’s chiefly the former — rose by nearly three-quarters of an hour from 2019 to 2022, more than it had increased over the previous 16 years. It does appear that, since the pandemic, most of the additional gaming time has come from work and sports/exercise/recreation. American men 65 and older spent an average of just more than five hours a day watching TV in 2022, up from just more than four in 2003.
