Tweet: [.@SpaceX has launched just shy of 5,000 Starlink internet satellites since 2019, and more than 4,500 are currently working.](#)

Summary: SpaceX launched 15 more of its Starlink internet satellites Monday night and landed the returning rocket on a ship at sea. A Falcon 9 rocket topped with the Starlink spacecraft lifted off from California's Vandenberg Space Force Base. The Falcon 9's first stage came back to Earth as planned, landing on the SpaceX drone ship Of Course I Still Love You about 9.5 minutes after launch. This was the second Starlink launch for SpaceX in as many days. A Falcon 9 lofted 22 of the satellites from Cape Canaveral Space Force Station in Florida on Sunday night. SpaceX has now launched 4,918 Starlink spacecraft to date, and more than 4,500 of them are currently functional.
