Author(s)	Matt Klein
Publication	The Overshoot
Publication Date	December 07, 2022

**Tweet:** .@M\_C\_Klein updates his Russian imports series, and finds that Russian imports have stabilized at 76% of pre-war levels, up 56% from the March-May 2022 monthly average. Imports with potential military uses are about 1/3 of the pre-war average.

**Summary:** The average monthly value of exports to Russia in August-October was 24% below the average monthly value before the invasion and 56% higher than the March-May 2022 monthly average. Overall exports of manufactured goods with potential military applications have been largely unchanged. Chinese and Turkish exports of machinery, electronics, and other goods with potential military uses have soared since June, with the total in October about a third below the pre-war average.
