**Tweet:** American households still have \$1.7 trillion in excess savings, \$350 billion of which are in the hands of the lower half of the income distribution. @NickTimiraos @WSJ<sup>[OBJ]</sup>

**Summary:** Household, nonfinancial corporate and small-business sectors ran a surplus of total income over total spending equal to 1.1% of gross domestic product in the quarter of April to June, according to economists at Goldman Sachs Group Inc. Using a three-year average, the measure is healthier than on the eve of any U.S. recession since the 1950s. U.S. households still have around \$1.7 trillion in savings they accumulated through mid-2021 above and beyond what they would have saved if income and spending had grown in line with the prepandemic economy, according to estimates by Fed economists. Around \$350 billion in excess savings as of June were held by the lower half of the income distribution, or around \$5,500 per household on average.
