Tweet: Firms seeking skilled workers are a key driver of skilled immigration to the US; US-based multinational companies account for about 1/3 of H-1B visa applications. @BrittaGlennon

Summary: In the US economy, US-based multinational companies account for about one-third of H-1B visa applications, not including foreign multinational companies who also hire H-1B workers. Not coincidentally, US multinational companies account for 80% of the research and development done by US firms. A relatively small group of industries accounts for most of the H-1B visas. Figure 1 illustrates that most firms utilizing the program are in the same industry—Professional, Scientific, and Technical Services—with Manufacturing a distant second. In 2022 five firms Tata Consultancy, Amazon, Google, Microsoft, and Infosys accounted for nearly 10% of all H-1B approvals. This skewness has increased over time. The skewness is apparent geographically as well; 22.5% of approved H-1B petitions were allocated to employers in California alone.
