Tweet: The Defense Department manages schools for about 66,000 students and achieves proficiency outcomes far higher than national averages. DoD schools performed better than any US state in 2022, in part because they avoided pandemic declines. @nytimes

Summary: With about 66,000 students — more than the public school enrollment in Boston or Seattle — the Pentagon’s schools for children of military members and civilian employees quietly achieve results most educators can only dream of. On the National Assessment of Educational Progress, a federal exam that is considered the gold standard for comparing states and large districts, the Defense Department’s schools outscored every jurisdiction in math and reading last year and managed to avoid widespread pandemic losses. While the achievement of U.S. students overall has stagnated over the last decade, the military’s schools have made gains on the national test since 2013.
