Tweet: High yield spreads are falling as firms are able to find financing at a mean of 378bps above Treasuries, 200bps lower than the 2022 high. @JonathanJLevin

Summary: The hand-wringing about the Great Maturity Wall appears to have been wildly overdone. A year ago, the bear case held that interest rates were rising and the economy was deteriorating at the same time that a surfeit of high-yield debt was coming due. But ever since that point, companies have been quietly extending their debt calendars. At the start of 2023, high-yield issuers had about \$878.4 billion in significant dollar-denominated bond and loan issues coming due through 2025. And since then, issuers have whittled the number down by about 38% to \$542.3 billion. Most signs suggest they will continue to make plodding progress. Related: Rates Are Up. We're Just Starting to Feel the Heat and A Default Cycle Has Started and Credit Normalization
