Tweet: The US trade deficit fell 19% in 2023 driven by a decline in imports as firms limited the buildup in inventories and consumers shifted spending towards services.

Summary: The annual trade shortfall shrank nearly 19% to \$773.4 billion from a record in 2022, Commerce Department data showed Wednesday. The narrowing of the US trade gap was the first in four years and reflected efforts by companies to limit the buildup in inventories, restraining demand for imports. American consumers' spending preferences continued to shift toward services and experiences after a pandemic-driven binge on merchandise. A more complex global trading system is showing through in US bilateral trade figures. The nation's merchandise deficit with China last year shrank 27% to an unadjusted \$279.4 billion, the smallest since 2010. The narrowing was the largest in data back to 2002. At the same time, the gap with Mexico grew to a record \$152.4 billion.
