Tweet: The wave of murders associated with the pandemic has seemingly crested. Homicide rates are still well above the pre-pandemic level, but 2022 homicides were down 5% from 2021. @foxjust

Summary: The shocking rise in murders that began in the summer of 2020 looks as if it may have played out. In the nearly complete tally of 2022 homicide statistics from 93 US cities compiled by AH Datalytics, murder and non-negligent manslaughter was down 5% from the year before. There were still many more people murdered in the US in 2022 than before the pandemic in 2019 — going by the AH Datalytics estimates it was 4,764, or 28.7%, more. Murder rates are also much, much higher in the US than in other wealthy nations. But with weekly crime statistics from the three biggest US cities showing a continuing and possibly accelerating murder decline so far in 2023, it does look as if a return to the awful conditions of the 1970s through early 1990s probably isn't in the cards.
