**Tweet:** Households earning under \$50,000 a year expect to increase their spending by 8% next year, while households earning \$100,000 a year are expecting their spending to increase by only 5%. @wsj

**Summary:** Early in the pandemic, several rounds of government relief allowed Americans in general, and lower-income Americans in particular, to build up their finances. Then the job market came roaring back and poorer workers found they could get paid a lot more than they did before. Many white-collar professionals haven't seen their wages outstrip inflation, but people doing lower-paying work have, and the latter group's wealth has risen more, too.
