**Tweet:** There is early evidence that Al's impact on labor markets is following the path of other forms of automation. @erikbryn @AdamThierer @DAcemogluMIT

**Summary:** The more a demographic group's work has been displaced by automation, the less its real wages have grown since 1980. In fact, automation explains about 70% of the between-group inequality in the US since 1980. As shown in Figure 9, establishments have slowed their hiring of non-Al workers (and much more so than they increase the number of Al specialists they hire). So overall, the early rollout of Al seems to have taken the same automation path other digital technologies of the 1980s, 1990s, and 2000s followed. This overall decline in hiring therefore confirms Al is replacing human workers in some occupations, even after accounting for Al-skilled job creation.
